

Introducing Spam and Virus Email Protection

Block Attacks on Your Email System Before they Reach Your Network

Email Security is Critical

Email is a vital communications channel for organisations of all kinds – from corporations to educational institutions and government agencies. As a result, email systems have become an even more important component of their information infrastructure. But with the significant growth of spam, viruses and other types of email-borne attacks in the past few years, system managers are finding it more challenging to manage and protect this critical communications asset.

Costly Spam Attacks are on the Rise

While email-borne viruses continue to be a problem, unsolicited commercial email, or spam, has become the fastest growing and most troublesome email security issue. Our supplier processes billions of messages per month, recent statistics show that 10 out of every 12 messages are spam.

Spam is more than just a nuisance. Many corporations report that they receive more junk email than legitimate email, causing corporate email users to lose the convenience factor electronic communications provides.

Protect Your Company

Unsolicited email creates many issues including:

- I**ncreased strain on the network and IT resources
- D**ecreased productivity and lost revenue
- E**xposure to legal liabilities

Enjoy the Benefits

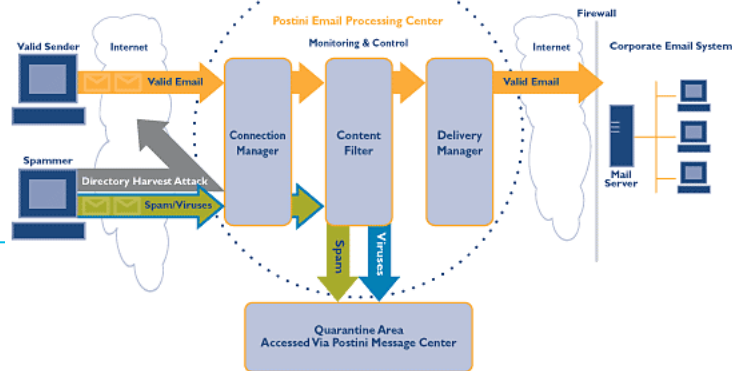

With Spam and Virus Email Protection from Ace you can:

- A**ccurately filter emails to eliminate spam and viruses
- D**eploy software easily across legacy mail servers
- S**ecure your email directory from harvesting
- C**ustomise filters
- S**ave on CPU cycles by blocking invalid messages

How does Spam and Virus Email Protection Work?

Our Spam and Virus Email Protection provides a secure and managed email system without the need for software or hardware. Using patent-pending pass-through technology (versus store-and-forward methods), email bound for a company's email server is processed in real-time through highly secure service architecture.

Within milliseconds, our email security solution separates spam and viruses from legitimate messages. Legitimate email is instantly passed on to the destination mail server. Suspicious email can either be quarantined in a web-based, password-protected message centre for administrator or end-user review, or tagged and delivered. The entire process is fully automated – valid emails pass through and cannot be physically accessed by any persons other than the recipient.

Why choose Spam and Virus Email Protection from Ace?

The system we use processes over 1 billion messages daily for over 35,000 customers, and serves over 9.1 million end users. It is therefore uniquely positioned with a significant advantage in fighting spam and viruses and protecting corporations' mission critical email from malicious attacks. The system processes unprecedented and centralized real-time view into the constantly evolving threat from spammers – and can aggregate and use that knowledge to the immediate benefit of its entire customer base. Our Spam and Virus Email Protection not only understands what spam is, it understands who the spammers are and how their tactics change on a minute-by-minute basis. This proprietary and highly accurate system is unmatched by anyone in the industry and can take direct action to protect corporate email systems from attack.

The statistics from Ace's own customer base which uses this product show that in a 30 day period, 52.3% of all email was blocked/removed and 9.9% was quarantined for end user checking. One organisation had over 97% of its email blocked or quarantined due to the high amount of spam they receive. The features of our Spam and Virus Email Protection include:

- M**onitoring and management tools provide detailed visibility of email traffic
- R**obust enough to handle traffic spikes and unbalanced loads
- R**equires no manual update of software to maintain protection
- M**aintains mail queue during intermittent losses of network connectivity
- S**ystem-wide monitoring and reporting
- C**an easily create logical user groupings
- P**rovides an integrated management console across installation
- G**uaranteed with a 99.999% Service Level Agreement
